

# INSTRUCTIONS FH4 (+ dimmer)

1. Remove completely the Interior lights from the ceiling (FH4-Series)
  2. Remove both festoon Halogen bulbs and connect it with the festoon base of the led plates (White lights) (any of 2 works)
- 

3. Pass a double core cable between the led plates (watch picture)

4. Connect the Red lights cable with the cable that we extended between the led plates (driver's side)

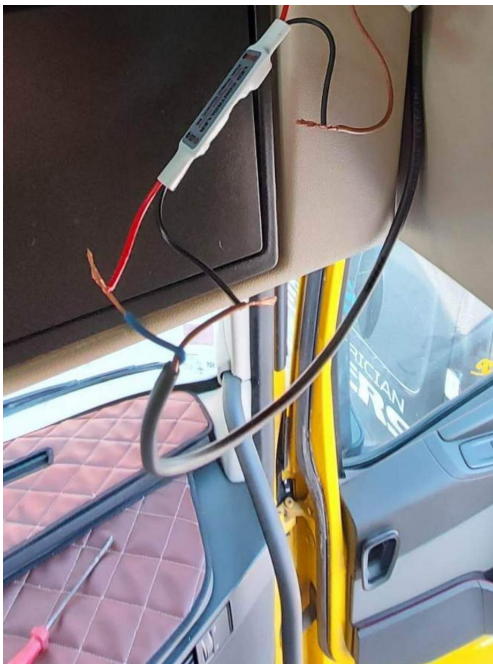

Black cable (-) ground

Red Cable (+) current

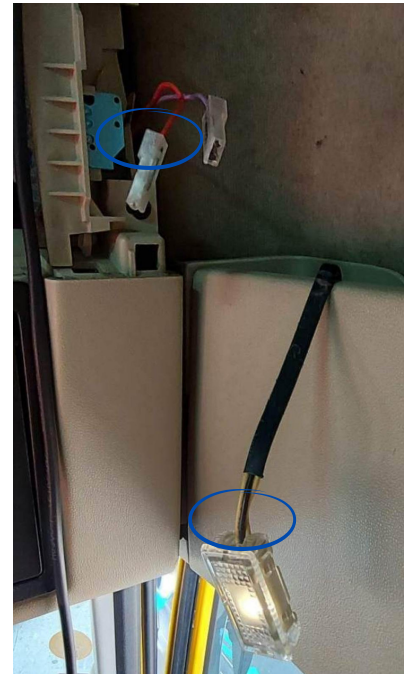

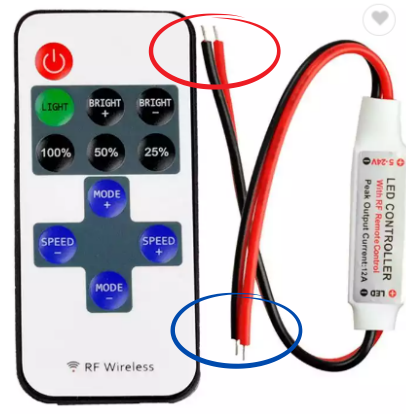

5. Repeat the same process on the other side (co-driver's side) and extend a second double core cable by removing the cover of the cupboard

6. Finally the dimmer should be connected between the third cable that we extended and the cupboard's switch red cable (+)

you can get ground (-) from the black cable of the secret lights (watch picture)

### Dimmer Connection Sides:

**9-32V (input) + connect it with the second extended double core cable**

**LED (Output) + connect the Black cable of the dimmer with the black cable (ground) of the light and the red cable of the dimmer with the red cable (current) of the fuse**

Installation should happen from a professional truck electrician

be careful not to touch the dimmer cables between them to avoid burning it
