

Volvo Version 5 Interior Lights

Using an auto electrician is advised when fitting these products

Step One: Remove Existing Light panels place 2 x holes as per below to allow the wiring from the LED Panels

Step Two : Carefully insert the LED panels with the 3m tape provided making sure the wire are as per the pic below

Step Three : To ensure both interior lights function together, first connect them to each other by extending a dual-core cable through the roof. Once connected, extend the wiring to the existing original dimmer switches (White/Red), allowing you to control both lights simultaneously for on/off functionality and dimming. Extend wires both white and red (From the LED Panels) to the original existing dimmer lights (White / Red)
